```
The present invention relates to phosphatase polypeptides, nucleotide sequences encoding them, as well as various products and methods useful for the diagnosis and treatment of various phosphatase-related diseases and conditions. Substance that modulates the activity of phosphatase polypeptide is used to treat immune-related diseases and disorders, cardiovascular disease, brain or neuronal associated diseases and metabolic disorders, including cancers of tissues, cancers of hematopoletic origin, diseases of central and peripheral nervous system, Alzheimer's disease, Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, viral infections, infections caused by prions bacteria and fungi, ocular diseases, diabetes, migraines, pain, sexual dysfunction, mood disorders, attention disorders, neurological disorders, hypotension, hypertension, psychotic disorders, neurological disorders, dyskinesias and organ transplant rejection. The present amino acid sequence is human Scp003 phosphatase polypeptide. This sequence is classified as dual specificity phosphatase (DSP) and MAP curion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                   Novel phosphatase polypeptide useful for treating cancers, immune-related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases and metabolic disorders

The present sequence represents a human regulator of intracellular phosphorylation (HRIP). HRIP is useful for screening agonists and antagonists of HRIP polypeptide. HRIP and its agonist or antagonist are useful for treating a disease or condition associated with decreased or increased expression of functional HRIP. Diseases treated or diagnosed include neurological disorders such as stroke, Parkinson's disease, demyelinating diseases, bacterial and viral meningitis and neuromnscular disorders, myasthenia gravis, cell proliferative disorders such as actinic Keratosis, anteriosclerosis, atherosclerosis and cancer including leukaemia, melanoma, myeloma and cancer of the adrenal gland, bladder, bone marrow, liver, lung, muscle, ovary, autoimmune/ inflammatory disorders such as Addison's disease, acquired immunodeficiency diseases, allergies, bronchitis, diabetes mellitus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel human intracellular phosphorylation regulator polypeptides and polynucleotides for diagnosis, prevention and treatment of neurological, cell proliferative and autoimmune/inflammatory disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sequences. The present sequence is one such phosphatase. Phosphatases are enzymes that catalyse the dephosphorylation of proteins modified by phosphorylation of serine, threonine or tyrosine residues. The phosphatases are useful for treating a variety of diseases: for example cancer e.g. breast, urogenital, prostate, head, neck, lung cancers, synovial sarcomas, renal cell carcinoma, non-small cell lung cancer, hepatocellular carcinoma, pancreatic endocrine tumours, stomach cancer,

                                                                                                                                                                                                                                                                                                          (PHSP), designated PHSP1-PHSP31 (the protein sequence for PHSP28 is not yearen in the specification). The sequences were isolated from CDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; sequences have activities such as: cytostatic; hepatotropic; vulnerary; cytospathic; antiparkinsonian; nocircopic; neuroprotective; vulnerary; antiparkinsonian; nocircopic; immunosuppressant; limunostimulant; cardiant; thrombolytic; cytogulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; the presence of or predisposition to, or preventing or treatining the presence of or predisposition to, or preventing or treating the proteins and nucleic acids may be used to treat cancers; proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, dlabetes mellitus, cythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, auticimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antinifiammatory disease; to enhance companied immunodesis; and as a contraceptive.
allergy; aplastic anaemia; nocturnal haemoglobinuria; burn; wound; bone damage; cartilage damage; antiinflammatory disease; coagulation; thrombosis; contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   81 FTHVLNAAHGRWNVDTGPDYYRDMDIQYHGVEADDLPTFDLSVFFYPAAAFIDRALSDDH 140

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The CSAPTP nucleic acid and protein molecules are used to modulate regulation of cellular processes. CSAPTP nucleic acid and protein molecules and modulators of CSAPTP activity and expression can be used to treat a subject with a disorder characterized by aberrant CSAPTP expression or activity. These disorders can include an immune disorder. CC an anti-proliferative disorder, a proliferative disorder e.g. renal and carcinomas, a metabolic disorder e.g. diabetes, viral pathogenesis, a neural disorder, a cardiovascular disorder e.g. phyertension or coronary heart disease or a disorder rising from improper phosphorylation of a phosphorylated protein. Anti-CSAPTP antibodies are used to isolate CSAPTP by standard techniques, to facilitate the purification of natural and recombinantly produced CSAPTP from cells, to detect CSAPTP protein in cell supernatant for evaluating the level of CSAPTP expression and to monitor protein levels in tissue as part of a clinical testing procedure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New cardiovascular system associated protein tyrosine phosphatases are used in the diagnosis and treatment of e.g. immune disorders, anti-proliferative disorders, metabolic disorders and cardiovascular

The present sequence is one such phosphatase. Phosphatases are enzymes that catalyse the dephosphorylation of proteins modified by phospharylation of serine, threonine or tyrosine residues. The phosphatases are useful for treating a variety of diseases: for example cancer e.g. breast, urogenital, prostate, head, neck, lung cancers, synovial sarcomas, renal cell carcinoma, non-small cell lung cancer, hepatocellular carcinoma, pancreatic endocrine tumours, stomach cancer, glioblastoma, colorectal cancer and thyroid cancer, pathophysiological
to determine efficacy of a treatment procedure. CSAPTP nucleic acids, antibodies and protein molecules can be used in screening assays and in predictive medicine e.g. prognostic assays, monitoring clinical trials
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Phosphatase; gene therapy; enzyme; cancer; pathophysiological hypoxia; cardiac dysfunction; wascular disorder; myopathy; ectodermal dysplasia; congenital muscle disorder; Papillon-Lefevre syndrome; Cowden disease; Moebius syndrome; Bjornstad syndrome; Bannayan Zonana syndrome; schizophrenia; hamartoma.

in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries of the peripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and constants.
                                                                                                                                                The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful

isolation of dual-specificity mitogen-activated protein kinase (MAPK) phosphatase DSP-7. The antibody specific to DSP-7 and the antisense phosphatase DSP-7. The antibody specific to DSP-7 are useful for detecting DSP-7 expression in a sample which comprises an RNA or cDNA preparation. The antibody is linked to a support material and a detectable marker and the amount of DSP-7 polynucleotide hybridized to the antisense polynucleotide is determined using PCR or hybridisation assay. The isolated DSP-7 polypeptide is useful for screening agents that modulate DSP-7 activity. The identified agents are useful for treating Duchenne muscular dystrophy, cancer, graft-versus-host disease, autoimmune diseases, allergies, metabolic diseases, abnormal cell growth, abnormal cell proliferation and cell cycle abnormalities.
                                                                                                                  Novel dual-specificity mitogen-activated protein kinase phosphatase polypeptide used in assays to identify agents that modulate the enzyme's activity, which are useful for treating cancer and autoimmune diseases
                                                                                                                                                                                                                                                                                           present sequence is given in a method relating to the

                                                                                                                                                                                                                                                                                   Included in the invention are an expression vector comprising a polynucleotide encoding the DSP-9 protein, a host cell transformed by the expression vector, and an antibody that specifically binds to DSP-9. DSP-9 has cytostatic; immunosuppressive; antiallargic; and antiprolliferative activity. DSP-9 modulating agents are useful for modulating a proliferative response, differentiation or survival of a cell which displays contacting inhibition of cell growth, anchorage independent growth or an altered intercellular adhesion property, in a patient. DSP-9 agonists and antiagonists are also useful for treating a disorder associated with DSP-9 activity such as Duchenne muscular dystrophy, cancer, graft-versus-host disease, autoimmune disease, allergies, metabolic disease, abnormal cell growth, abnormal cell cycle abnormalities. The present sequence

The DSP-9 protein has the ability to dephosphorylate an activated mitogen activated protein (MAP) kinase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                            Domain
                                                                                                                                                                                                                                       Homo
    The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system (iseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence data for this patent did not form part of the printed

The present invention relates to phosphatase polypeptides, nucleotide sequences encoding them, as well as various products and methods useful for the diagnosis and treatment of various phosphatase-related diseases and conditions. Substance that modulates the activity of phosphatase polypeptide is used to treat immune-related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases and metabolic disorders, including cancers of tissues, cancers of hemmatopoietic origin, diseases of central and peripheral nervous system, Alzheimer's disease, Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, viral infections, infections caused by prions, bacteria and fungi, ocular diseases, diabetes, migraines, pain, sexual dysfunction, mood disorders, attention disorders, neurological disorders, hypotension, hypetension, psychotic disorders, neurological disorders, dyskinesias and organ transplant rejection. The present amine acid sequence is human Scp060 phosphatase (DSP) and MAP chinse phosphatase (MKP). SGP060 gene maps to chromosomal position
Parkinson's disease; multiple sclerosis; amyotrophic lateral sclerosis; cardiovascular disease; brain; neuronal-associated disease; dyskinesia; attention disorder; cognition disorder; psychotic disorder; cytostatic; neurological disorder; virucide; nootropic; cerebroprotective; therapy; neuroprotective; antibacterial; vulnerary; tranquilliser; antiasthmatic; hypotensive; immunosuppressive; antipsoriatic; analgesic; hypertensive; antifungal; dual specificity phosphatase; DSP; MAP kinase phosphatase; MRP; migraine; chromosome 8p11.1-q11.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel phosphatase polypeptide useful for treating cancers, immune-related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases and metabolic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hill RJ;

XX

CR AMA42347-AMA4415) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are completed from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful on the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; c) immune disorders e.g. Addison's disease, allergies, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal colitis; (c) cardiovascular disorders such as viral, bacterial, fungal printed specification, but was obtained in electronic format directly from WIPO at ftp. WiPo. int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to phosphatase polypeptides, nucleotide sequences encoding them, as well as various products and methods useful for the diagnosis and treatment of various phosphatase-related diseases and conditions. Substance that modulates the activity of phosphatase polypeptide is used to treat immune-related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases and metabolic disorders, including cancers of tissues, cancers of heematopoietic origin, diseases of central and peripheral nervous system, Alzheimer's disease, Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, viral infections, infections caused by prions, bacteria and fungi, ocular diseases, diabetes, migraines, pain, sexual dysfunction, mood disorders, attention disorders, ognition disorders, hypotension, hypertension, psychotic disorders, neurological disorders, dyskinesias and organ transplant rejection. The present amino acid sequence is human SCPO14 phosphatase polypeptide. This sequence is classified as dual specificity phosphatase (DSP) and MAPP (Annea) and Annea) and Annea and Annea and Annea and Annea and Annea and Annea Annea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ä,

New human hydrolase-like molecules (HHLMS) and polynucleotides encoding
the HHLMS, useful for diagnosing, treating or preventing cell
proliferation (e.g. bone cancer) or autoimmune disorders(e.g. AIDS or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to isolated and purified cDNA encoding a human hydrolase-like molecule (HHLM), designated HHLM-1 to HHLM-8. The HHLM DNAs and polypeptides are useful for diagnosing, treating or preventing cell proliferation disorders and autoimmune disorders. Cell proliferation disorders include cancers, autoimmune disorders include AIDS (acquired immune deficiency syndrome): The present sequence is a HHLM protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                99 DYYRDMDIQYHGVEADDLPTFDLSVFFYPAAAFIDRALSDDHSKILVHCVMGRSRSATLV 158

                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                 US-09-847-519A-2

```
Sequence 7, Application US/08990379
Patent No. 598188
GENERAL INFORMATION:
APPLICANT: Stork, Philip J
APPLICANT: Stork, Philip J
APPLICANT: Stork, Philip J
APPLICANT: Misra-Press, Anita
TITLE OF INVENTION: Micogen Activated Protein Kinase Phosphatase cDNAs and
TITLE OF INVENTION: Micogen Activated Protein Kinase Phosphatase CDNAs and
TITLE OF INVENTION: Micogen Activated Protein Kinase Phosphatase CDNAs and
TITLE OF INVENTION: Micogen Activated Protein Kinase Phosphatase CDNAs and
TITLE OF INVENTION: Micogen Activated Protein Kinase Phosphatase CDNAs and
TITLE OF INVENTION: UMBER: US/08/990,379
CURRENT APPLICATION NUMBER: US/08/10402
EARLIER APPLICATION NUMBER: 60/000,263
EARLIER PILING DATE: 1996-06-14
EARLIER FILING DATE: 1995-06-16
NUMBER OF SEQ ID NOS: 19
SOFTWARE: Patentin Ver. 2.0

Novel phosphatase polypeptide useful for treating cancers, immune-related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases and metabolic disorders

Claim 7; Fig 2; 186pp; English.

The present invention relates to phosphatase polypeptides, nucleotide sequences encoding them, as well as various products and methods useful for the diagnosis and treatment of various phosphataser-related diseases and conditions. Substance that modulates the activity of phosphatase polypeptide is used to treat immune-related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases and metabolic disorders, including cancers of tissues, cancers of haematopoietic origin, diseases of central and peripheral nervous system, Alzheimer's disease, Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, viral infections, infections caused by

neuromuscular disorders, mysthenia gravis, cell proliferative disorders such as actinic keratosis, arteriosclerosis, atherosclerosis and cancer including leukaemia, melanoma, myeloma and cancer of the adrenal gland, bladder, bone, bone marrow, liver, lung, muscle, ovary, autolmmune/ inflammatory disorder such as Addison's disease, acquired immunodeficiency diseases, allergies, bronchitis, diabetes mellitus, rheumatoid arthritis, microbial infection and trauma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Parkinson's disease; multiple sclerosis; amyotrophic lateral sclerosis; cardiovascular disease; brain; neuronal-associated disease; dyskinesia; attention disorder; cognition disorder; psychotic disorder; cytostatic; neurological disorder; virucide; nootropic; cerebroprotective; therapy; neuroprotective; antibacterial; vulnerary; tranquilliser; antiasthmatic; hypotensive; immunosuppressive; antipsoriatic; analgesic; hypertensive;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a human regulator of intracellular phosphorylation (HRIP). HRIP is useful for screening agonists and antagonists of HRIP polypeptide. HRIP and its agonist or antagonist are useful for treating a disease or condition associated with decreased or increased expression of functional HRIP. Diseases treated or dispanced include meurological disorders such as stroke, Parkinson's disease, demyelinating diseases, bacterial and viral menigitis and other developmental disorders of the central nervous system,
                                                                                                                                                                                                                                                                                                                                                              Novel human intracellular phosphorylation regulator polypeptides and polynucleotides for diagnosis, prevention and treatment of neurological, cell proliferative and autoimmune/inflammatory disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 MTSGEVKTSLKNAYSSAKRLSPKMEEEGEEEDYCTPGAFELERLFWKGSPQYTHVNEVWP 60

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral neropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, anyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      assays for receptor activity, arthritis and inflammation, leukaemias and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 disorders, hypotension, hypertension, psychotic disorders, neurological disorders, dyskinesias and organ transplant rejection. The present amino acid sequence is human SCP014 phosphatase polypeptide related exon.
SCP014 sequence is classified as dual specificity phosphatase (DSP) and MAP kinase phosphatase (MKP). SCP014 gene maps to chromosomal position
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sequences encoding them, as well as various products and methods useful for the diagnosis and treatment of various phosphatase-related diseases and conditions. Substance that modulates the activity of phosphatase polypeptide is used to treat immune-related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases and metabolic disorders, including cancers of tissues, cancers of haemacopoletic origin, diseases of central and peripheral nervous system. Alzheimer's disease, Parkinson's disease, multiple sclerosis, ammyotrophic lateral sclerosis, viral infections, infections caused by prions, bacteria and fund, coular diseases, diabetes, migraines, pain, sexual dysfunction, mood disorders, attention disorders; cognition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel phosphatase polypeptide useful for treating cancers, immune-related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases and metabolic disorders

                                                                                                                                                                                                    New human hydrolase-like molecules (HHLMs) and polynucleotides encoding the HHLMs, useful for diagnosing, treating or preventing cell proliferation (e.g. bone cancer) or autoimmune disorders(e.g. AIDS or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Dual specificity phosphatase-9; DSP-9; human; cytostatic; cell growth; immunosuppressive; antiallergic; antiproliferative; autoimmune disease; cancer; graft-versus-host disease; allergy; metabolic disorder.
                                                                                                                                                                                                                                                                    The present invention relates to isolated and purified cDNA encoding a human hydrolase-like molecule (HHIM), designated HHIM-1 to HHIM-8. The HHLM DNAs and polypeptides are useful for diagnosing, treating or preventing cell proliferation disorders and autoimmune disorders. Cell proliferation disorders and autoimmune disorders. Cell ALDS (acquired immune deficiency syndrome). The present sequence is a HHLM protein of the invention.

This invention relates to an isolated dual specificity phosphatase-9 (DSP-9) and its variant. The DSP-9 protein has the ability to dephosphorylate an activated mitogen activated protein (MAP) kinase.

C dephosphorylate an activated mitogen activated protein (MAP) kinase.

C included in the invention are an expression vector comprising a polynucleotide encoding the DSP-9 protein, a host cell transformed by the expression vector, and an antibody that specifically binds to DSP-9.

C DSP-9 has cytostatic; immunosuppressive; antiallargic; and antiprolliferative response, differentiallargic; and modulating a prolliferative response, differentiallard of a cell which displays contacting inhibition of cell growth, anchorage independent growth or an altered intercellular adhesion property, in a patient. DSP-9 activity such as Duchenne muscular disorder associated with DSP-9 activity such as Duchenne muscular disorder associated with DSP-9 activity such as Duchenne muscular cystrophy, cancer, graft-versus-host disease, autoimmune disease, allergies, metabolic disease, abnormalities. The present sequence

                                                                                                                                                                                                                           The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as paripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and

The present invention relates to phosphatase polypeptides, nucleotide sequences encoding them, as well as various products and methods useful for the diagnosis and treatment of various phosphatase-related diseases and conditions. Substance that modulates the activity of phosphatase conditions. Substance that modulates the activity of phosphatase and conditions. Substance that modulates the activity of phosphatase collapsed is used to treat immune-related diseases and disorders, including cancers of tissues, cancers of nematopoletic origin, diseases of central and peripheral nervous system, Alzheimer's disease, Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, viral: infections, infections caused by prions, bacteria and fungi, ocular diseases, diabetes, myradines, pain, secural dysfunction, modo disorders, attention disorders, nypotension, hypertension, psychotic disorders, neurological disorders, dyskinesias and organ transplant rejection. The present amino acid sequence is classified as dual specificity phosphatase (DSP) and MAP chine or the present chine chine the present chine chine the properties or the present chine chi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel phosphatase polypeptide useful for treating cancers, immune-related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases and metabolic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                           g
                                                                                                                                                                                                                                                           The CSAPTP nucleic acid and protein molecules are used to modulate regulation of callular processes. CSAPTP nucleic acid and protein molecules and modulators of CSAPTP activity and expression can be used to treat a subject with a disorder characterized by aberrant CSAPTP expression or activity. These disorders can include an immune disorder, an anti-proliferative disorder, a proliferative disorder e.g. renal and lung carcinomas, a metabolic disorder e.g. diabetes, viral pathogenesis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New cardiovascular system associated protein tyrosine phosphatases are used in the diagnosis and treatment of e.g. immune disorders, anti-proliferative disorders, metabolic disorders and cardiovascular
                                                                                                                                                                                                                                                                                                                      /note= "Protein himss" - .

ö
a neural disorder, a cardiovascular disorder e.g. hypertension or coronary heart disease or a disorder rising from improper phosphorylation of a phosphorylated protein. Anti-CSAPTP antibodies are used to isolate CSAPTP by standard techniques, to facilitate the purification of natural and recombinantly produced CSAPTP from cells, to detect CSAPTP protein in cell supernatant for evaluating the level of CSAPTP expression and to monitor protein levels in tissue as part of a cilnical testing procedure to determine efficacy of a treatment procedure. CSAPTP nucleic acids, antibodies and protein molecules can be used in screening assays and in predictive medicine e.g. prognostic assays, monitoring clinical trials
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                immunosuppressive; antiinflammatory; anti-HIV; antibacterial; vulnerary; antiparkinsonian; antisickling; antianaemic; antiarthritic; cancer; antirheumatic; hepatotropic; cerebroprotective; antiinflammatory; antiallergic; antidiabetic; antiulcer; anticonvulsant; antifungal; antiparasitic; cardiant; immune disorder; cardiovascular disorder; neurological disease; infection; nephrotropic; gene therapy; vaccine.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; SGP014 phosphatase polypeptide; phosphatase-related disease; immune-related disorder; ocular disease; organ transplant rejection; infection; diabetes; pain; sexual dysfunction; Alzheimer's disease; metabolic disorder; pain; sexual dysfunction; Alzheimer's disease; multiple sclerosis; amyotrophic lateral sclerosis; cardiovascular disease; multiple sclerosis; amyotrophic lateral sclerosis; attention disorder; cognition disorder; psychotic disorder; cytostatic; neurological disorder; virucide; nootropic; cerebroprotective; therapy; neuroprotective; antibacterial; vulnearay; transquilliser; antibactmatic; hypotensive; intibacterial; vulnearay; transquilliser; antibactmatic; hypotensive; intibactmatic; analgesic; hypotensive; antibactmatic; analgesic; hypotensive; antifungal; dual specificity phosphatase; DSP; MAP kinase phosphatase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel genes (AAI62752-AAI62961) and proteins (AAM42347-AAM42415) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adream gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. addison's disease, allergies, autoimmune hamolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel plasma membrane associated proteins useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancer, immune response and neuronal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;

The present invention relates to phosphatase polypeptides, nucleotide sequences encoding them, as well as various products and methods useful for the diagnosis and treatment of various phosphatase-related diseases and conditions. Substance that modulates the activity of phosphatase polypeptide is used to treat immune-related diseases and disorders, including cancers of tissues, carcitovascular disease, brain or neuronal-associated diseases and metabolic disorders, including cancers of tissues, cancers of hematopoletic origin, diseases of central and peripheral nervous system, Alzheimer's disease, Parkinson's disease, multiple sclerosis, amyotrophic. Lateral sclerosis, viral infections, infections caused by prions, bacteria and fungi, ocular diseases, diabetes, migraines, pain, saxual dysfunction, mood disorders, attention disorders, ognittion disorders, hypotension, hypertension, psychotic disorders, neurological disorders, dyskinesias and organ transplant rejection. The present anno acid sequence is human ScPO14 phosphatase polypeptide. This sequence is classified as dual specificity phosphatase (DSP) and MAP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
